BENEFICIOS

## PROPIEDADES MEDICINALES

### Cardioprotectoras, hipocolesterolémicas

#### Principales aplicaciones

- Mejorar la salud cardiovascular
- Reducir el riesgo de obesidad
- Retrasar la neurodegeneración

#### Compuestos bioactivos

- Ácidos grasos no saturados (linoleico y oleico)
- Compuestos fenólicos

#### Acciones medicinales

Se ha demostrado que las **grasas no saturadas** de las pecanas (ácidos grasos oleico y linoleico) modifican los lípidos y las lipoproteínas en hombres y mujeres, reduciendo así los niveles nocivos de colesterol. Por otro lado, las pecanas proporcionan un alto contenido de **compuestos fenólicos**, que se cree que son responsables de proteger de la oxidación a los lípidos de la sangre, lo que ayuda a prevenir la enfermedad de las arterias coronarias.
